Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

• "I spend over 15 to 20 hours jumping between 15 travel tabs, Reddit, TripAdvisor, and blogs just to plan a 4-day trip."

• "Pre-packaged agency tours are too rigid, overpriced, and packed with commercial tourist traps."

• "I want a trip that matches my exact vibe and budget, without spending half my day stuck in cross-city transit."

THINKS

• "Will I be able to stay within my budget without sacrificing great food and authentic local experiences?"

• "Is this daily schedule realistic, or will I be completely exhausted by 3 PM?"

• "I wish I could customize or regenerate just one day instead of having to scrap the whole plan."

DOES

• Manually copies attractions, addresses, and notes into cluttered phone Notes apps and spreadsheets.

• Compares flight/hotel prices and manually tallies currency exchange estimates in mental math.

• Abandons pre-made static itineraries when weather or unexpected closures ruin one day's schedule.

FEELS

• **Overwhelmed** by endless conflicting reviews, blogs, and choice paralysis.

• **Anxious** about hidden travel expenses, missing must-see spots, or bad scheduling.

• **Empowered & Delighted** when receiving an instant, cohesive, customizable plan with morning, afternoon, and evening slots.
