Project Proposal (Proposed Solution)

Date	21 October 2026
Team ID	VAI-AI-2026
Project Name	VoyageAI — Personalized AI Travel Itinerary Planner
Maximum Marks	5 Marks

Executive Project Proposal:

VoyageAI leverages cutting-edge Generative AI and modern web architecture to revolutionize travel planning. It eliminates fragmented manual research by synthesizing realistic, day-by-day itineraries tailored to destination, dates, budget, travel party, and aesthetic vibe.

System Capability	Technical Architecture	Business & User Impact
Intelligent AI Synthesis	Groq Cloud LPU running openai/gpt-oss-120b with hardware JSON mode.	Sub-second itinerary synthesis with 0 truncation errors.
Multi-Tenant Security	Supabase PostgreSQL with Row-Level Security (RLS) & JWT verification.	Complete user data isolation; private trips protected.
Interactive Timeline	React 19, Tailwind CSS v4, Zustand store, and responsive Lucide badges.	Seamless customization of morning, afternoon, evening slots.
Offline Readiness	Printer-friendly CSS styling generating offline Print-to-PDF itineraries.	Travelers access day schedules without requiring roaming data.
